Risk and Reward Profile

Typically lower rewards Typically higher rewards

The scale above shows the fund's risk category using the standard indicator of risk and volatility used by all UCITS funds.

The risk category is based on the historical volatility of the price of shares in the fund, which depends on the underlying volatility of the investments the fund makes. The historic volatility of the fund's investments means the risk category for the share class is 6. Historical data may not be a reliable indication for the future risk profile of the sub-fund and share class. The risk category shown is not guaranteed and may shift over time. Investors should note that the lowest category does not mean the investment is 'risk free'.

The fund may also be exposed to other material risks that the risk indicator does not adequately capture. These may include:

- **Investment Risk:** The fund offers investors exposure to a sector which is stimulated by rapidly evolving technology. The fund has a diversified exposure to a range of companies in sectors which can have volatile company specific returns. The fund is also exposed to general stock market volatility caused by, for example, political and economic instability. As such, the fund may not achieve its investment objective and investors may suffer possible losses of up to the amount invested.
- **Liquidity Risk:** In very highly stressed market conditions, the fund may have difficulty buying or selling certain securities readily, which may have a financial impact on the fund.

For a more detailed explanation of these and other risks, please refer to the 'Risk Factors' section of the prospectus.
